

Dan Blankenship - notes on telephone conversation with him in martin's river Sept. 28/76.

Golder Report

We were told by Golder (toronto consultants) that if anybody else came in to Oak Island and they were genuinly interested in putting down a shaft in the money pit area, then the technical data that we have (in the gloder report) would be worth at least \$50,000. The damn thing cost us about \$125,000. for all the drilling and all the engineering that went into it. The report is the size of a telephone book.

Dan is "convinced" that he's going to make a major find on the island by Christmas. Probably in 10-X when he goes gown again to cut holes in the casing.
